Welcome

Your new Hunter® ceiling fan is an addition to your home or office that will provide comfort and performance for many years. This installation and operation manual gives you complete instructions for installing and operating your fan.

We are proud of our work. We appreciate the opportunity to supply you with the best ceiling fan available anywhere in the world.

Before installing your fan, for your records and warranty assistance, record information from the carton and Hunter nameplate label (located on the top of the fan motor housing).

Cautions and Warnings

- READ THIS ENTIRE MANUAL CAREFULLY BEFORE BEGINNING INSTALLATION. SAVE THESE INSTRUCTIONS.
- Use only Hunter replacement parts.
- To reduce the risk of personal injury, attach the fan directly to the support structure of the building according to these instructions, and use only the hardware supplied.
- To avoid possible electrical shock, before installing your fan, disconnect the power by turning off the circuit breakers to the outlet box and associated wall switch location. If you cannot lock the circuit breakers in the off position, securely fasten a prominent warning device, such as a tag, to the service panel.
- All wiring must be in accordance with national and local electrical codes and ANSI/NFPA 70. If you are unfamiliar with wiring, use a qualified electrician.
- To reduce the risk of personal injury, do not bend the blade attachment system when installing, balancing, or cleaning the fan. Never insert foreign objects between rotating fan blades.
- To reduce the risk of fire, electrical shock, or motor damage, do not use a solid-state speed control with this fan. Use only Hunter speed controls.
Mounting and Optional Accessories

Understanding Mounting
Hunter’s patented mounting system provides you maximum installation flexibility and ease. You can install your Hunter fan in one of two ways, depending on your preference: Standard or Angle mounting. The steps in this manual include instructions for both mounting methods.

Considering Optional Accessories
Consider using Hunter’s optional accessories, including a wall-mounted or remote speed control. To install and use the accessories, follow the instructions included with each product. For quiet and optimum performance of your Hunter fan, use only Hunter speed controls.

Standard Mounting
hangs from the ceiling by a downrod (included), recommended for ceilings 8 feet or higher

For ceilings higher than 8 feet, you can purchase Hunter extension downrods. All Hunter fans use sturdy 3/4” diameter pipe to assure stability and wobble-free performance.

Angle Mounting
recommended for a vaulted or angled ceiling

34° Max
Pitch 8
12
1 • Getting Ready

To install a ceiling fan, be sure you can do the following:
• Locate the ceiling joist or other suitable support in ceiling.
• Drill holes for and install wood screws.
• Identify and connect electrical wires.
• Lift 40 pounds.

If you need help installing the fan, your Hunter fan dealer can direct you to a licensed installer or electrician.

Gathering the Tools

You will need the following tools for installing the fan:
• Electric drill with 9/64” bit
• Standard screwdriver
• Phillips-head screwdriver
• Wrench or pliers

Checking Your Fan Parts

Carefully unpack your fan to avoid damage to the fan parts. Check for any shipping damage to the motor or fan blades. If one of the fan blades was damaged in shipment, return all the blades for replacement.

If any parts are missing or damaged, contact your Hunter dealer or call Hunter Parts Department at 888-830-1326 (In Canada, call 1-866-268-1936).

Preparing the Fan Site

Before you begin installing the fan, follow all the instructions in the pullout sheet called “Preparing the Fan Site.” Proper ceiling fan location and attachment to the building structure are essential for safety, reliable operation, maximum efficiency, and energy savings.
2-1. Drill two pilot holes into the wood support structure through the outermost holes in the outlet box. The pilot holes should be 9/64" in diameter.

2-2. Your fan comes with four neoprene noise isolators (“Isolators”). Position the isolators between the ceiling plate and ceiling by inserting the raised areas on each isolator into the holes in the ceiling plate.

2-3. Thread the lead wires from the outlet box down through the hole in the middle of the ceiling plate.

2-4. Align the slotted holes in the ceiling plate with the pilot holes you drilled in the wood support structure. For proper alignment use slotted holes directly across from each other.

**Note:** The isolators should be flush against the ceiling.

2-5. Place a flat washer on each of the two 3” screws and pass the screws through the slotted holes in the ceiling plate into the pilot holes you drilled.

Tighten the screws into the 9/64” pilot holes; do not use lubricants on the screws. Do not over tighten.

---

**For Angled Ceilings:** Be sure to orient the ceiling plate so that the arrows printed on the ceiling plate are pointing towards the ceiling peak.
3-1. Install three 25 Watt Candelabra bulbs.

3-2. Place the glass uplight onto the fan assembly.

3-3. Insert the downrod through the canopy, canopy trim ring, and glass uplight. Feed the wires from the fan through the downrod.

⚠️ **CAUTION:** The adapter has a special coating on the threads. Do not remove this coating; the coating prevents the downrod from unscrewing. Once assembled, do not remove the downrod.

3-4. Loosen the set screw. Screw the downrod into the fan assembly. Retighten the set screw.

3-5. Raise the fan and place the hook on the ceiling plate through the U-shaped hole in the rim of the canopy.

⚠️ **WARNING:** Fan may fall if not assembled as directed in these installation instructions.
4 • Wiring the Fan

All wiring must be in accordance with national and local electrical codes and ANSI/NFPA 70. If you are unfamiliar with wiring, use a qualified electrician.

4-1. Disconnect the power by turning off the circuit breakers to the outlet box and associated wall switch location.

4-2. To connect the wires, hold the bare metal leads together and place a wire connector over them, then twist clockwise until tight.

⚠️ CAUTION: Be sure no bare wire or wire strands are visible after making connections.

4-3. Connect the wires as follows:
   • The green or bare ground wire from the ceiling to the green ground wire from the ceiling plate and the green ground wire from the fan
   • The white (common) power wire from the ceiling to the white wire from the fan
   • The black power wire from the ceiling to the black wire from the fan

4-4. Push all wires and wire connectors back through the ceiling plate hole into the outlet box.
Installing the Canopy and Canopy Trim Ring

5-1. Holding the canopy, raise the fan off the hook.

5-2. Align the slots in the canopy with the tabs on the ceiling plate.

5-3. Raise the canopy over the ceiling plate. Rotate the canopy clockwise until the tabs on the ceiling plate totally engage with the slots in the canopy.

5-4. Loosely assemble the three canopy screws into the canopy one at a time. Once all three screws are in, tighten them.

5-5. Using both hands, push the canopy trim ring up to the top of the canopy. The canopy trim ring will snap and lock into place.

Should you need to remove the canopy trim ring, follow these steps:

1. Locate the tab indicators, small bumps on top of tabs.

2. Press firmly on opposite sides of the ring towards the canopy. The tabs will flex out releasing the trim ring from the canopy.
6 • Assembling the Blades

Hunter fans use several styles of fan blade irons (brackets that hold the blade to the fan).

6-1. Your fan may include blade grommets. If your fan has grommets, insert them by hand into the holes on the blades.

6-2. Attach each blade to a blade iron using three blade assembly screws. If you used grommets, the blades may appear slightly loose after screws are tightened. This is normal.

6-3. Remove the blade mounting screws and rubber shipping bumpers from the motor.

6-4. For each blade, insert one blade mounting screw through the blade iron, and attach lightly to the fan. Insert the second blade mounting screw, then securely tighten both mounting screws.
7 • Installing the Light Kit

**WARNING:** Use only the light fixture supplied with this fan model.

7-1. To attach the upper light kit assembly, partially install two #6-32 x 3/8” housing assembly screws into the switch housing mounting plate.

7-2. Feed the upper plug connector through the center opening of the assembly.

7-3. Align the keyhole slots in the assembly with the housing assembly screws.

7-4. Turn the assembly counterclockwise until the housing assembly screws are firmly situated in the narrow end of the keyhole slots. Install the remaining #6-32 x 3/8” screw into the housing. Tighten all three screws firmly.

**CAUTION:** Make sure the upper light kit assembly is securely attached to the switch housing mounting plate. Failure to properly attach and tighten all three assembly screws could result in the switch housing and light fixture falling.

7-5. To attach the light kit, connect the upper plug connector from the motor to the lower plug connector in the light kit.

**Note:** Both plug connectors are polarized and will only fit together one way. Make sure the connectors are properly aligned before connecting them. Incorrect connection could cause improper operation and damage to the product.

7-6. Place the light kit fitter inside the upper light kit assembly. Align the side screw holes. Attach the fitter to the upper assembly with two #6-32 x 3/8” assembly screws.

**Note:** In compliance with US federal energy regulations, this ceiling fan contains a device that restricts the light kit to a maximum of 190 Watts. Exceeding that limit or the marked limit on this product may result in fire hazard or improper operation.
7-7. Install two B10 bulbs. (60 watt maximum each)

7-8. To install the glass shade, loosen the thumbscrew and slide the moveable cradle out.

7-9. Seat the shade in the three cradles. Push the moveable cradle back in and tighten the thumbscrew.
8 • Assembling the Remote Control and Mounting the Cradle

8-1. To install the battery, remove the back cover of the remote. Insert the included 12 volt alkaline battery (Type 23A, MN-21 or equivalent) inside the remote, matching polarity on the battery as indicated by the + and - symbols in the battery compartment. Replace the cover.

If you are using more than one remote controlled fan in the same area and want to control them separately, you must change the dip switch settings in the remote before you install the battery. For instructions on setting the dip switches, read the box on the next page.

8-2. **To install the remote cradle on a switch plate,** remove the two screws holding the switch cover plate. Do not remove the cover plate.

**Note:** If you are installing the remote cradle on a rocker light switch, first break off the two tabs by pushing outward.

Orient the control cradle by lining up the two mounting holes with those on the switch. Insert and tighten the screws (do not over tighten).

8-3. **To install the remote cradle on the wall,** locate a 2 x 4 wall stud in a convenient location. Orient the remote cradle over the 2 x 4 stud. Use 1” wood screws in either the inner or outer mounting holes.

Wall anchors and 6-32 x 1” screws may be used in situations where mounting to a stud is not possible. Use the inner mounting holes.

⚠️ **CAUTION:** The remote control device complies with part 15 of the FCC rules. Changes or modifications not expressly approved by Hunter Fan Company could void your authority to operate this equipment.

Operation is subject to the following two conditions:
1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

**Note:** Use with a fan that incorporates an air gap switch (normal on-off wall switch).

⚠️ **WARNING:** Maximum fan load is 100 Watts; maximum lamp is 300 Watts. Do not use any speed control with this product.
Setting the Dip Switches

You will only have to change the dip switch settings in the remote if you are using more than one remote controlled fan in the same area and want to control them separately. You may want to label your remotes to ensure you do not mix them up.

1. At the circuit breaker or fuse box, turn the power off for the fan you want to change. Do not turn the power off at the circuit breaker for the previously installed fan, as you may inadvertently change the dip switch code settings for it as well.

2. Slide the cover off the back of the remote and remove the battery. The battery must be removed when changing dip switch settings. Refer to Step 8-1.

3. Change the dip switch settings, so that they are different from the previously installed fan.

4. Replace the battery and cover.

5. At the circuit breaker or fuse box, turn the power back on for the fan whose settings you are changing.

6. Within 20 seconds of restoring power, push the 3 (high), 2 (medium), and 1 (low) buttons (in that order) on the remote.

**Note:** The receiver (built into the fan) has a memory function that retains the last dip switch code setting. The setting will not change in the event of power failure or if the power to the fan is inadvertently shut off.
9-1. Turn on electrical power to the fan. The first time you turn the fan on, push the 3 (high), 2 (medium), and 1 (low) buttons (in that order) on the remote to send the code to the receiver. The receiver (built into the fan) has a memory function that retains the dip switch code setting. This setting will not change in the event of power failure or if the power to the fan is inadvertently shut off.

9-2. To start the fan, press the speed button on the remote at the level you desire: 3 for high, 2 for medium, 1 for low. To turn off the fan, press the off button on the remote.

9-3. You can control the uplight and downlight using separate buttons on the remote. To turn the light on or off independently from the fan, press the appropriate light button once for gradual off or twice for instant off.

With the Auto Resume feature, the light will come on at the level you used last. You can also hold the light button down to use the remote as a dimmer. (As you hold the button, the light level will move throughout its entire range within 16 seconds.) Release the button at the desired level.

9-4. Ceiling fans work best by blowing air downward (counterclockwise blade rotation) in warm weather to cool the room with a direct breeze. In winter, having the fan draw air upward (clockwise blade rotation) will distribute the warmer air trapped at the ceiling around the room without causing a draft.

**To Change Airflow Direction**
Press the reversing switch on the remote while the fan is running.

---

**In warm weather, use downward air flow pattern**
9-5. For cleaning finishes, use a soft brush or lint-free cloth to prevent scratching. A vacuum cleaner brush nozzle can remove heavier dust. Remove surface smudges or accumulated dirt and dust using a mild detergent and a slightly dampened cloth. You may use an artistic agent, but never abrasive cleaning agents, as they will damage the finish.

9-6. Clean wood finish blades with a furniture polishing cloth. Occasionally, apply a light coat of furniture polish for added protection and beauty. Clean painted and high-gloss blades in the same manner as the fan finish.

In cold weather, use upward air flow pattern.
**10 • Troubleshooting**

**Problem: Nothing happens; fan does not move.**
1. Turn power on, replace fuse, or reset breaker.
2. Loosen canopy, check all connections according to the wiring the fan section.
3. Remove the shipping bumpers.

**Problem: Noisy operation.**
1. Tighten the blade assembly screws and blade iron armature screws until snug.
2. Check to see if the blade is cracked. If so, replace all the blades.

**Problem: Excessive wobbling.**
1. If your fan wobbles when operating, use the enclosed balancing kit and instructions to balance the fan.
2. Tighten all blade iron screws.
3. Turn power off, support fan very carefully, and check that the hanger ball is properly seated.

**Problem: Lights dim when turned on or do not turn on**
1. Check to make sure wattage of light bulbs installed match the specifications on the light socket.

**Problem: If the light on this fan shuts off suddenly.**
1. Turn the power to the fan off at the wall switch. Wait 30 seconds, then resume power to the fan.

If you need parts or service assistance, please call 888-830-1326 (In Canada, call 1-866-268-1936) or visit us at our Web site at http://www.hunterfan.com.
